Bolgiano's CAPITOL PARK LAWN GRASS SEED

THE NATION'S PRIDE

IT IS the accumulated experience of fifty years that has made possible the development of Bolgiano's Capitol Park Lawn Grass Mixture. It contains a carefully selected, well-balanced blend of high-quality re-cleaned seed. Through the years we have learned that the finest lawns for the Washington area are those made of fine-bladed deep-rooting grass. It is an easy matter to have a good-looking lawn in spring but it is the year-round test that determines the quality of good lawn seed. We are proud of our Capitol Park Lawn Seed and we believe you will find this leader in the Washington area the answer to your lawn problem.

BOLGIANO'S MODERN LAWN GRASS MIXTURES

BOLGIANO'S "WHITE HOUSE" SHADY LAWN GRASS SEED

The Grass That Will Grow in Shady Places

To provide a turf for shady places which would match the turf of our Capitol Park Lawn Grass in the sun we experimented with grasses best adapted for growing in the shade until this formula was perfected. The resulting White House Shady Lawn Seed has removed cause for worry about those once bad places under trees.

Lb. 85c.; 5 lbs. \$4.00; 10 lbs. \$7.75; 25 lbs. \$18.00

HORMONE-TREATED LAWN SEED

Treating seeds with Rootone Hormone Powder serves to augment the natural hormones which stimulate root-formation and top-growth. In our Hormone-treated Lawn Grass Mixture we use only the best varieties of seed, including Bent Grass.

Lb. \$1.10; 10 lbs. \$10.25; 25 lbs. \$24.75

BOLGIANO'S "FAIRGREEN" LAWN GRASS SEED

A Superior Mixture with Creeping Bent

Lb. \$1.00; 5 lbs. \$4.75; 25 lbs. \$22.50

WHITE DUTCH CLOVER (*Trifolium repens*)

Some White Clover is usually included in lawn grass mixtures as it makes an excellent turf that stands constant trampling. It is of dwarf habit, spreads rapidly and is very hardy.

Lb. \$1.25; 5 lbs. \$5.75; 25 lbs. \$25.00

KENTUCKY BLUE GRASS (*Poa pratensis*)

This is undoubtedly the best of lawn grasses for neutral soils. Its splendid root system forms a tough sod that will stand hot, cold or dry weather. Although Blue Grass requires about two years to get well established, it is well worth waiting for. Can be sown in a mixture of other grasses. Sow in fall or spring at the rate of 5 pounds per 1000 square feet.

RED-TOP (*Agrostis vulgaris*)

CHEWING'S FESCUE

This important component of all good shady lawn mixtures forms a low, dense, mat-like turf of fine needle-like leaves. It is popular for lawns and golf courses because of its drought-resistance and ability to thrive on most soils. If used alone, sow 8 pounds per 1000 square feet.

GARDENING IN 1947

JUST a word of greeting to our many friends and customers as they open the latest edition of our yearly catalog. In the fifty-eight years that we have been located in Washington, we have seen good times and bad come and go. The war years were difficult enough for everyone and "the duration was worse than the war."

However, uncertain economic conditions are likely to point up the fact that enduring things are more valuable than ever. A good piece of farmland is still a good investment, and a productive home garden is a great asset when food prices are soaring. It provides healthful vegetables for your family in greater abundance than you would care to buy in the market, and at the same time it gives you relaxation through exercise.

No doubt you are able to pay more attention to flower gardening now than formerly. We offer a variety of both annuals and perennials that are sure to make your grounds more attractive. Our vegetable and flower seeds are of top-quality strains and we do our utmost to keep them that way, and at reasonable prices. On this basis we solicit your continued orders.

Frostproof Cabbage Plants WILL DOUBLE YOUR PROFITS

Ready for Immediate Delivery

Matures Heads Two to Three Weeks Earlier Than Your Home-grown Plants

Our plants are grown in the South where are found soil and climatic conditions just suited for growing tough, hardy Cabbage plants during the winter and early spring. Here the plants develop steadily until they are ready for shipment at 8 to 10 weeks of age. They are then very tough and hardy and can be planted in the open ground a month to six weeks sooner than the more delicate hotbed or coldframe plants.

When spring comes the plants grow very fast, maturing headed Cabbage 2 to 3 weeks sooner than from hotbed or coldframe plants. Think what the difference in profit will be if your crop is matured and marketed before the general crop from home plants is matured!

Lettuce is an excellent source of vitamin A and furnishes a goodly quantity of vitamin C.

CULTURE. Sow seed in rows as soon as the ground can be worked. Cover the seed $\frac{1}{2}$ inch deep and press soil down firmly, or it may be sown in a hotbed in February or March, transplanting to a sheltered position for an early crop. Thin plants to 8 inches apart for good head Lettuce or have plants close together for loose-leaf Lettuce. Lettuce does best during cool, moist weather.

PARSLEY

One ounce will sow 200 feet of row; 3 to 4 pounds, an acre.
Prices include postage on pkts., ozs., $\frac{1}{4}$ lbs., and lbs.

CULTURE. Parsley needs a mellow, rich soil and the seed is slow to germinate. A good plan is to soak the seed a few hours in warm water and then plant $\frac{1}{2}$ inch deep and thin plants to stand 8 to 10 inches apart. If the leaves of curly varieties are all cut off when they are 3 inches tall, growth will be better. Liberal cutting of Parsley improves quality. For winter use move plants to a coldframe or light cellar, or a supply can be potted in 6-inch flower-pots and grown in a kitchen window.

194. Emerald or Extra Curled Dwarf. (70 days.) The beautifully curled bright green leaves are very tender. Long stems make it easy to bunch for market. An attractive garnish variety. Pkt. 5c.; oz. 15c.; $\frac{1}{4}$ lb. 40c.; lb. \$1.25, postpaid.

319. Market Gardeners' Best Triple Curled. (70 days.) "Best-in-Garden" variety. Robust, free-growing plants which are improved by severe cutting. The large, dark green leaves are beautifully curled. 126. Plain or Single. (70 days.) The very dark green leaves are flat, deeply cut but not curled and are principally used for flavoring soups and stews, as the flavor is strong. Can be dried and bottled for winter use. Pkt. 5c.; oz. 15c.; $\frac{1}{4}$ lb. 45c.; lb. \$1.50, postpaid.

PARSNIP

One ounce will sow 200 feet of row; 3 to 4 pounds, an acre.
Prices include postage on pkts., ozs., $\frac{1}{4}$ lbs., and lbs.

CULTURE. Parsnips prefer a rich deep sandy loam. Avoid stony ground and new manure. Sow as early as possible in rows, covering $\frac{1}{2}$ inch deep, and press soil down firmly. Thin to stand 5 inches apart in row. Leaving the roots in ground over winter improves the flavor.

SMOOTH or SEMI-WRINKLED VARIETIES. 15-lb. and 60-lb. lots not postpaid.

Peas are not only delicious food but they contain iron and vitamins A, C and B. Every garden needs lots of Peas.

CULTURE. Peas mature earliest in light, rich soil. For general crop use a rich, deep loam or one inclining to clay. When grown in garden sow in double rows 6 to 8 inches apart; the rows 2 to 4 feet apart. Commence sowing the extra-early varieties as early as the ground can be worked in February or March; plant for a succession every two weeks until June, then discontinue until the middle of August, when a good crop may be secured by sowing extra-early and early sorts for fall use. They should be kept clean and earthed up twice during the growth. The wrinkled varieties are not as hardy as the small, round sort and if planted early should have a dry soil or they are liable to rot in the ground. They are, however, the sweetest and best-flavored varieties. The dwarf varieties are best suited for small gardens.

Extra-Early Dwarf Varieties

561. American Wonder. *Wrinkled.* (60 days.) The 12-inch vines are very productive. Pods contain 5 to 8 tender sweet Peas. Pkt. 10c.; lb. 40c.; 2 lbs. 75c.; 5 lbs. \$1.40, postpaid.

Bolgiano's selected Maine Seed assures not only a larger crop but an earlier one of Potatoes of the highest quality.

We offer only varieties which have proved most satisfactory in our customers' fields and gardens after exhaustive trials.

We are prepared to ship at any time but must warn that shipments ordered made during severe cold weather travel solely at purchaser's risk.

Sweet Potatoes

CULTURE. Don't wait for a rain or a "season" to set out Sweet Potato plants. Harrow your ground well before laying it off, then throw up the ridges higher than you want them, and if the soil is very dry, allow 2 or 3 days for the moisture to rise. Then knock off the top of the ridge just ahead of planting; make a mud batter with water and clay loam, or better, with the addition of fresh cow-dung, about as thick as cream; dip the plants, in hands of about 20, into this, so that mud clings to them.

Plants ready in May and should be planted in May or June.

TOBACCO

CULTURE. One ounce of Tobacco produces at least 10,000 plants if sown properly. It is advisable to sow as early as possible, the usual custom being to make a large fire over the place intended for the seed-bed, in order to destroy weed seeds. The ground is put in the finest possible condition, the seed sown broadcast on the surface and pressed down firmly with a plank or the back of a spade, after which the bed must be protected by cotton or covering. When seedlings get 5 to 6 inches high they are transplanted in rows 4 feet apart, with 3 feet between the plants. Cultivate thoroughly.

158. Connecticut Seed-Leaf. Hardy, prolific variety grown principally for cigar Tobacco.

Pkt. 10c.; oz. 35c.; ¼lb. \$1.15, postpaid.
147. Maryland Broad-Leaf. Bears thick, broad leaves which produce a high percentage of bright Tobacco when cured. Pkt. 10c.; oz. 35c.; ¼lb. \$1.15, postpaid.

CULTURE. They do best in highly enriched, light, sandy or gravelly soils. Commence sowing the earliest varieties in April in drills from 12 to 15 inches apart, and thin out early to 6 to 9 inches in rows. For a succession sow at intervals of a fortnight until the last week in July; from then until the end of August sowing may be made for the fall and main crop. Turnips may be preserved until spring by cutting off the tops about 1 inch from the bulb, storing in the cellar or cold shed during the winter, covering the roots with dry sand. FIELD CORN

HYBRIDS by Lester Pfister

Every farmer notes the reason for big Pfister yields at planting time: **Even planter drop** due to careful grading; **high germination count** because of careful processing; **quick, vigorous growth** due to good breeding; **standability and resistance** to adverse conditions, due to breeding and testing; **heavy ears** filled with quality grain, again due to Pfister characteristics.

Pfister 164 (Hy x 187) x WF9 x 38-11. Maturity, 115 to 120 days. Large cylindrical ears with deep, medium-rough kernels. Adaptable to a wide variety of soils. It is definitely a one-eared hybrid. The stiff stalk carries ears at uniform height, making picking easy.

Koal King Brooder

Efficient, low-cost operation is the outstanding virtue of this reliable coal burner stove. The **KOAL KING** sets a standard for a really successful and serviceable brooder stove. Offers unsurpassed chick-saving results and at prices sensationally low.

The **KOAL KING** has a scientifically designed flue cylinder, which automatically feeds the coal to the fire as required. The coal does not get "clogged" or "hung" in the stove. As long as there are a few pounds of coal left in the stove to burn, the fire will not die down or go out. Another important improvement: **The Koal King Has a Large Non-Clogging Grate, Which Insures the Positive Burning of the Coal.** It makes possible the holding of a large fire body. Either hard or soft coal may be used with entire satisfaction. **Heavy Cast Iron Stove** means longer life and better service.

SPECIAL FEATURES

Sturdy Folding Hover gives easy access to all parts of the brooder stove.

Large Shaker Grates. By a mere turn of the shaker, ashes are sifted out without disturbing the fire.

VENTILATED BOTTOM

This important feature is a valuable asset, because it maintains a continuous circulation of air under the stove, which protects floor from heat. As a further precaution, the base of the stove is underlined with a heavy asbestos pad.

Thermostat Control. Wafer is suspended at correct height to give perfect heat control.

SPECIFICATIONS

No. 539. 60 lbs. coal capacity; 1000 Chick capacity; 56-in. canopy; 10 3/4-in. grate; 5-in. flue; 130 lbs. shipping weight. Each \$31.50.
